PROGRAM GOALS

1. Spur Early CV Tech Deployment
   - Wirelessly Connected Vehicles
   - Mobile Devices
   - Infrastructure

2. Measure Deployment Benefits
   - Safety
   - Mobility
   - Environment

3. Resolve Deployment Issues
   - Technical
   - Institutional
   - Financial
Organizing Principles

- Pilots will be *pilot deployments*, that is, real-world environment deployments
  - If successful, deployed technologies are expected to remain as permanent operational elements

- There will be *multiple* pilot sites over time
  - Each site will have different needs, focus and applications
    - That is, pilot deployments must address a critical problem
    - The needs of each site must drive the application selection process

- Pilot deployments are expected to be both *large-scale and multi-modal*
  - *Large-scale* implies pilot deployments will have measureable impact, not a specific minimum geographic or vehicle fleet size
  - Sites will deploy *multiple applications* drawing on the products of USDOT and other connected vehicle research
PROPOSED PILOT DEPLOYMENT REQUIREMENTS

- Multiple connected vehicle applications must be deployed together
  - Cost-effectively leveraging captured CV and mobile device data
  - Address multi-modal problems

- Pilot deployments should leverage USDOT-sponsored research
  - Need not include all applications (in fact, this is unlikely to be practical)
  - May include new connected vehicle applications not considered by USDOT
  - All applications selected must work and have an impact

- Pilot deployments should include the capture of data from multiple sources
  - At a minimum, vehicles must represent one source of data used in the pilot deployment
PROPOSED PILOT DEPLOYMENT REQUIREMENTS

- Multiple forms of communications technologies are desired
  - DSRC desired as one communication technology
  - Integrated or carry-in devices for connected vehicles capable of generating an SAE J2735 Basic Safety Message (BSM)

- Well-defined, focused, quantitative performance measures
  - Support an independent evaluation effort

- Share pilot deployment data and lessons learned
  - While protecting privacy and intellectual property

- Security and credentialing management system
PARTNERSHIP AND DEPLOYMENT PHASES

- Partnership Expectation
  - Encourage partnerships of multiple stakeholders
    - Public Sectors
    - Private Sectors
    - Academic/Research Institutions
  - Partnership Expectations
    - A clear leader or a collaboration of organizations

- Proposed Deployment Phases
  - Pre-Pilot Deployment Concept Development Stage: 6 – 9 months
  - Pre-Pilot Site Development Stage: 10 –14 months
  - Pilot Deployment Stage: 18 months
The USDOT has made a significant investment in foundational research and initial development of connected vehicle applications:

- Concepts of Operations
- System Requirements
- Prototype Design and Testing
- Prototype Impacts Assessment
- Analytics, Modeling and Simulation to Assess Potential Long-Term Impacts

Not all CV Application efforts are in the same state of maturity, few are complete:
- But a large number of application development efforts across multiple programs will be substantively complete in late 2014
## Connected Vehicle Applications

### V2I Safety
- Red Light Violation Warning
- Curve Speed Warning
- Stop Sign Gap Assist
- Spot Weather Impact Warning
- Reduced Speed/Work Zone Warning
- Pedestrian in Signalized Crosswalk Warning (Transit)

### V2V Safety
- Emergency Electronic Brake Lights (EEBL)
- Forward Collision Warning (FCW)
- Intersection Movement Assist (IMA)
- Left Turn Assist (LTA)
- Blind Spot/Lane Change Warning (BSW/LCW)
- Do Not Pass Warning (DNPW)
- Vehicle Turning Right in Front of Bus Warning (Transit)

### Agency Data
- Probe-based Pavement Maintenance
- Probe-enabled Traffic Monitoring
- Vehicle Classification-based Traffic Studies
- CV-enabled Turning Movement & Intersection Analysis
- CV-enabled Origin-Destination Studies
- Work Zone Traveler Information

### Environment
- Eco-Approach and Departure at Signalized Intersections
- Eco-Traffic Signal Timing
- Eco-Traffic Signal Priority
- Connected Eco-Driving
- Wireless Inductive/Resonance Charging
- Eco-Lanes Management
- Eco-Speed Harmonization
- Eco-Cooperative Adaptive Cruise Control
- Eco-Traveler Information
- Eco-Ramp Metering
- Low Emissions Zone Management
- AFV Charging / Fueling Information
- Eco-Smart Parking
- Dynamic Eco-Routing (light vehicle, transit, freight)
- Eco-ICM Decision Support System

### Road Weather
- Motorist Advisories and Warnings (MAW)
- Enhanced MDSS
- Vehicle Data Translator (VDT)
- Weather Response Traffic Information (WxTINFO)

### Mobility
- Advanced Traveler Information System
- Intelligent Traffic Signal System (I-SIG)
- Signal Priority (transit, freight)
- Mobile Accessible Pedestrian Signal System (PED-SIG)
- Emergency Vehicle Preemption (PREEMPT)
- Dynamic Speed Harmonization (SPD-HARM)
- Queue Warning (Q-WARN)
- Cooperative Adaptive Cruise Control (CACC)
- Incident Scene Pre-Arrival Staging Guidance for Emergency Responders (RESP-STG)
- Incident Scene Work Zone Alerts for Drivers and Workers (INC-ZONE)
- Emergency Communications and Evacuation (EVAC)
- Connection Protection (T-CONNECT)
- Dynamic Transit Operations (T-DISP)
- Dynamic Ridesharing (D-RIDE)
- Freight-Specific Dynamic Travel Planning and Performance
- Drayage Optimization

### Smart Roadside
- Wireless Inspection
- Smart Truck Parking
PILOT DEPLOYMENT PROCESS

- **Pilot Deployment Concept Development Process**
  - Identify Local Needs
  - Set Performance Goals
  - Select CV Applications That Work Together Meet Those Goals

- **USDOT Sample Pilot Concepts from Hypothetical Locations**
  - Hypothetical, but realistic examples of localities applying the pilot deployment concept development process
SAMPLE DEPLOYMENT CONCEPT – DOWNTOWN SUNNYSIDE
~ Improving Congestion in an Urban Arterial Network ~

**Improve Transit Reliability**
- Connection Protection
- Transit Signal Priority

**Improve Pedestrian Safety**
- Mobile Accessible Pedestrian Signal System
- Pedestrian in Signalized Crosswalk Warning
- Intersection Movement Assist

**Improve Air Quality**
- Eco-Approach and Departure at Signalized Intersections
- Eco-Traffic Signal Timing

**Synergies among applications increase benefits and reduce costs**
SAMPLE DEPLOYMENT CONCEPT – HALLECK EXPRESSWAY
~ Improving Travel Time Reliability on an Urban Expressway~

**Reduce Incident Delay**
- Incident Scene Pre-Arrival Staging Guidance for Emergency Responders
- Incident Scene Work Zone Alerts for Drivers and Workers

**Improve Bottleneck Throughput**
- Speed Harmonization and Queue Warning
- Emergency Electronic Brake Lights and Forward Collision Warning

**Manage Diversions Better**
- EnableATIS
- Intelligent Signal Control

Synergies among applications increase benefits and reduce costs
SAMPLE DEPLOYMENT CONCEPTS – GREYPOOL COUNTY
~ Improving Safety and Mobility in a Rural Area ~

Increase Accessibility
- Dynamic Transit Operations

Improve Safety
- Red Light Violation Warning
- Stop Sign Gap Assist
- Left Turn Assist

Informing Drivers During Bad Weather
- Weather Response
- Traffic Information

Synergies among applications increase benefits and reduce costs
SAMPLE DEPLOYMENT CONCEPT – DISTRICT 13 OPERATIONS
~ Improving the Efficiency of Road Maintenance ~

Improve Snow Removal
- Enhanced Maintenance Decision Support System

Improve Management of Work Zones
- Work Zone Traveler Information

Improve Situational Awareness
- Probe-based Pavement Maintenance

Synergies among applications increase benefits and reduce costs
SAMPLE DEPLOYMENT CONCEPT – I-876 CORRIDOR
~ Improving Freight Movement in an Inter-State Corridor ~

- Improve Freight Productivity
  - Freight Advanced Traveler Information System
  - Drayage Optimization
  - Freight Signal Priority

- Improve Truck Safety
  - Curve Speed Warning
  - Do Not Pass Warning/Lane Change Warning

Synergies among applications increase benefits and reduce costs
# CV Pilots Deployment Schedule and Resources

## Proposed CV Pilots Deployment Schedule

Latest News & Updates

- Sample Deployment concept audio recordings for District 13 Operations is now available (9/23/14)
- Sample Deployment concept audio recordings for Greypool County is now available (9/22/14)
- Deployment concept audio recordings for Downtown Sunnyvale and H W Haller Expressway are now available (9/18/14)
- CV Pilots FAQs (Updated September 16, 2014)
- The USDOT Connected Vehicles Pilot Deployment Program Webinar Series Part 2: Communications and Role of DSRC is open for registration
- The presentation material of the USDOT Connected Vehicles Pilot Deployment Program Webinar Series Part 1 is available now
- The Descriptions of the Connected Vehicle Applications are available now
- Summary of Responses to the Connected Vehicle Pilot Deployment Program's Request for Information (RFI)

About the CV Pilots Deployment Project

The U.S. DOT (DOT) connected vehicle research program is a multimodal initiative that aims to enable safe, interoperable networked wireless communications among vehicles, infrastructure, and personal communications devices. Connected vehicle research is sponsored by the DOT and other to leverage the potential transformative capabilities of wireless technology to make our transportation safer, smarter, and greener. Research has resulted in a considerable body of work supporting pilot deployments, including concepts of operations and prototyping for more than a dozen applications. Concurrent Federal research efforts developed critical cross-cutting technologies and other enabling capabilities required to integrate and deploy applications.

Based on the successful results of the connected vehicle research program, and the recent decision by NHTSA to pursue vehicle to vehicle communications safety technology for light vehicles, a robust connected vehicle pilots program is envisioned as a mechanism to spur the implementation of connected vehicle technology. These pilots will serve as initial implementations of connected vehicle
